

Assessed Coursework 3:  
Object-Oriented Software Design (Group Work)  
Feedback Form <sup>1</sup>

**Group Name:**

**Group Members:**

1. In Class Exercise 1
2. In Class Exercise 2
3. Minutes Protocol
  
4. Software Application Design Report
  - (a) Has the group identified a reasonable number of classes? Any important classes missing?
  
  - (b) Are class names singular nouns by default? Do the chosen class names make sense? Are they intuitive?
  
  - (c) Does each class have an author?
  
  - (d) For each class, have the parent and child classes been identified?
  
  - (e) Has at least one responsibility been identified for each class? If not, for how many classes have responsibilities been identified?
  
  - (f) Has at least one collaboration been identified for each class? If not, for how many classes have collaborations been identified?

---

<sup>1</sup>continued on reverse side

- (g) Have reasonable protocols been defined for each class? Do method names correspond to verbs?
- (h) Have unit tests been described for each class?
- (i) Have at least three class hierarchies been identified and described?
- (j) Do classes in the hierarchies appear to reflect the *is-kind-of* relationship? If not, which ones don't seem to?
- (k) Have at least two-three sub-systems been identified and described?
- (l) Do classes in the subsystems appear to reflect the *is-part-of* relationship? If not, which ones don't seem to?
- (m) Has a user data file format description been provided?
- (n) Is the software design complete? Does it make sense? Have decisions been justified?
